

# ReCIRC™

## Animal Watering Systems

### Automation that eliminates the labor & material costs of manual delivery of water to the cage

- Re-circulating systems maintain constant water flow 24/7 with no dead legs.
- Advanced water purification system includes:
  1. RO filtration
  2. Continuous UV treatment
  3. Optional acidification
- Easy to maintain components
- Requires no solenoid valves or pressure stations
- Re-circulating tank provides 2 day water supply
- Interruption in water supply does not effect the operation of the system

L-2000™ Bedding Resistant Valve

ReCIRC™ Through Rack requires inlet and outlet connections on rack

ReCIRC System comes complete with tank, pumps and UV units

- Optional continuous flow through the rack eliminates manual flushing of racks
- Requires no solenoid valves or electrical controls
- Continuous flow helps to prevent bacterial adhesion that can lead to the formation of biofilm
- Optional monitoring available
